

Job Description

DevOps Engineer

Zerone Microsystems Private Limited

Zerone is now the largest SoftPOS provider in the world. It is backed by prominent people in the industry. We are now foraying into the online payment space through partnership with small Merchants which would allow us to further disrupt the category and open up a new source of growth.

About the Team:

Being in the cutting edge FinTech organisation, we focus on merchant platform experience, and how to be profitable while delivering value to our merchants. We build scalable systems that help us handle different amplitudes of demand during various events. We have a modern tech stack and the teams work with an agile mindset and are strongly aligned with business outcomes. With each team, you get the autonomy and the tools to work on product features and experiments, take them to your users in a short time, and use data to see the effect of your work. We are here to build a world-class tech organisation with elite engineers and change-agents who would help us get there. We are looking for engineers who are skilled, passionate, driven and a wee bit crazy (yes, crazy works!) to onboard our ship.

Here's our primary Tech Stack - Elastic Search, Java, Kotlin, NodeJS, Typescript, JavaScript, Kafka

Role & Responsibilities:

- Want to work at the bleeding edge of innovation and seek to do things no one else has done before.
- Want to work with a group of people who believe in the utmost transparency and ethical practices.
- Want to work with autonomy and high ownership of outcomes.
- Care about adding value to our users life.
- Crave for a steep learning curve and a good challenge.
- Mentor and guide more junior colleagues

Desired Skills & abilities:

- Minimum of 3 years of experience in DevOps with AWS.
- Excellent knowledge of Linux administration.
- Experience in software engineering best practices and design principles.
- Extensive hands on CI-CD technology experience.
- Proficient in Bash, Chef, Powershell, XML, RESTful, JSON, SOAP, XML
- AWS Certified Architect and/or developer, associate considered, professional preferred.
- Deep knowledge of multiple monitoring tools and how to mine them for advanced data.
- Prior work with Kubernetes, Helm, Docker, MongoDB, MySQL, Redis, ElasticSearch, microservices, message queues and related technologies.
- Understanding of product development lifecycle.
- Creative and innovative approach to problem solving and passion for continuous improvement.
- Experience in financial services and an understanding of the related regulatory requirements is a plus.
